

NAAMSE Security Assessment Report

Executive Summary

This security assessment tested 28 adversarial prompts against the target AI agent. The maximum vulnerability score achieved was 99.1/100, indicating a **CRITICAL** risk level. 26 prompts (92.9%) exceeded the vulnerability threshold, with an average score of 91.7/100. Fuzzing effectiveness improved by 35.4% across iterations.

Key Metrics

Metric	Value
Total Prompts Tested	28
Maximum Score	99.1/100
Average Score	91.7/100
High-Risk Prompts	26
Unique Clusters	4
Mutation Types	17
